What is Gear View QC? 7

Gear View QC 3.0.0 (April 2021) 7

 Features 7

 Enhancements 7

 Updates 7

What is Gear View QC?

The Gear View QC client is a PACS QC program that you use to correct common mistakes in DICOM image data. It provides functionality to view, import, edit, print, and send DICOM studies to PACS/EHR. QC function includes editing patient demographics and study details, reassigning studies and series, and editing DICOM fields at the image, series, study and patient level.

Gear View QC is intended for use by PACS administrators, physicians, and clinical staff. Users must understand the DICOM image format, as well as the clinical application of the images they modify. Gear View QC is not labeled for diagnostic use. Gear View QC is not intended for the long-term storage or management of patient information or data for patient monitoring. Verify data integrity before saving changes and deleting any original information from your PACS.

Gear View QC 3.0.0 (April 2021)

Features

This release includes the following features.

- Gear View QC 3.0 is now fully 64-bit.
- The Gear View QC installer is now fully compliant with TLS 1.2 and systems where TLS 1.0 and 1.1 are disabled.
- The Click Once client is no longer supported or included in Gear View QC.
- The system now saves the server IP and port values that you enter when launching the client.
- Gear View QC now supports Imaging Object Change Management (IOCM). For more information, see the Gear View QC User Help for more information.
- Gear View QC now supports Storage Commit. For more information, see the Gear View QC User Help for more information.

Enhancements

This release includes the following enhancements.

- Improved the loading speed of images.
- Improved the playback of cine series.

Updates

This release includes the following updates.

- Resolved an issue when upgrading a non-default drive installation.
- Resolved an issue when installing to a non-default drive location.
- Resolved an issue when upgrading where I18n.dll was not updated correctly.
- Resolved an issue where the system displayed images as static.
- Resolved an issue with the client unexpectedly terminating when viewing h265 videos.
- Resolved an issue with launching Gear View Basic when FIPS is enabled on the operating system.
- Resolved an issue with images masked in Gear View QC not displaying in Cerner SkyVue.
- Resolved an issue with image display when </PreloadOneFrame> is enabled.

- Resolved an issue with the Log Viewer when system language is set to non-English language.
- Resolved several cases of reliability.
