MDR Video Touch Technical Specifications

MDR Video Touch is a hardware device that captures and sends high resolution video from a wide range of modalities to PACS/VNA. It provides image and video capture and transfer at the point of care without the need of a workstation. You can connect one or more modalities to the MDR Video Touch unit, and configure the unit to connect to the PCS (PACSGEAR Core Server). This document provides technical specifications for the MDR Video Touch and PCS.

MDR Video Touch main unit
