What is PACS Scan Mobile?

PACS Scan Mobile is an app for iOS and Android mobile devices that physicians and authorized staff can use to capture images and videos. You can use the built-in camera of the mobile device to capture images or videos of your patient and then attach them to patient studies. When you are finished capturing images and videos you can edit them, send them to the selected source for storage, and optionally send an HL7 message to an HL7 device. You cannot save images and videos on your mobile device.

PACS Scan Mobile app is a client of PACSgear Core Server, which processes DICOM and non-DICOM medical data, and handles user accounts, security, client configuration, and the flow of data between modalities and destination DICOM systems.

The following requirements list the minimum technical specifications for PACS Scan Mobile.

Technical specifications

PACS Scan Mobile app requirements
