## Perceptive Image Service for Epic technical specifications

The Perceptive Image Service for Epic solution allows a user to access images stored in Perceptive Content directly from the Epic interface.

The solution also provides a method for Epic users to combine separate TIFF image pages of a document into a single, multi-page TIFF file. Epic requests images by their document ID and, if necessary, page number. After receiving the images from Perceptive Content, Image Service then formats the image content as either a multi-page TIFF or a single-page JPEG.

### Hardware

A server-class system is required.

### Operating systems

Runs on all Windows operating systems with .NET 4.0 installed.

### Software prerequisites

- Integration Server, version 7.1.5 and up
- .NET Framework, version 4.0 or newer
- File Conversion Service 3.0.x and up
