Perceptive Enterprise Search

Perceptive Enterprise Search is a suite of enterprise applications that offer a choice of options for high performance search and mobile information access. The technical specifications in this document are specific to Perceptive Enterprise Search version 10.6. A new technical specification is provided for each release. For the most accurate information, refer to the technical specifications document that matches your version of Perceptive Enterprise Search.

A required amount of memory and disk space is provided. You must meet these requirements to support your Perceptive Enterprise Search system. These requirements specifically list the needs of Perceptive Enterprise Search and do not include any amount of memory or disk space you require for the operating system, environment, or other software that runs on the same machine.

Some technical specifications also provide recommendations. While requirements define the minimum system required to run Perceptive Enterprise Search, the recommended specifications serve as suggestions to improve the performance of your system. For maximum performance, review your specific environment, network, and platform capabilities and analyze your planned business usage of the system. Your specific system may require additional resources above these recommendations.

Technical Specifications

The minimum technical specifications required for Perceptive Enterprise Search, as well as some recommendations, appear in the following table.
