About Perceptive eAuthorize

The Perceptive eAuthorize solution enables you to send documents for electronic signature to any authorized signatory, including non-ImageNow users. You can send documents, residing within or outside of ImageNow, to a single or multiple authorized signatories whose signatures are required. The signed documents upload automatically and are stored in the ImageNow repository. If the signatory declines the document, you receive an email notification. A signatory can also forward the email with the link to the documents to any person inside or outside your organization.

This solution offers the following advantages.

- The electronic process of signing saves you time.
- Anyone inside or outside your organization can sign documents.
- Signatories do not need access to ImageNow.
- Signatories receive email notifications of documents to sign. The email contains a link to the document and instructions. Alternatively, documents can be immediately presented on the user's screen. You can send a single document or an envelope containing multiple related documents.

Three different levels of eAuthorize are available.

- **Standalone.** AssureSign is sold as a standalone solution, with no integration with ImageNow.
- **Post-signature integration.** A non-ImageNow document is provided to AssureSign for signature, is signed, and then the signed document is uploaded into ImageNow.
- **Full integration.** An ImageNow document is submitted to AssureSign for signature, is signed, and then the signed document is uploaded to ImageNow
