Accounts Payable Patch (September 10, 2013)

This month's patch includes the following versions:

- Perceptive AP Invoice eForm 11.0.1.165
- Perceptive Intelligent Capture Connector 11.0.1.165

AP Invoice eForm

Enhancements

- AP Invoice eForm now automatically detects and supports ImageNow character encoding. In ImageNow 6.7 and earlier, AP Invoice eForm supports ISO-8859-1. In ImageNow 6.8 and higher, AP Invoice eForm supports UTF-8. The eForm automatically configures AP.xsl and AP_Invoice.xml with the necessary encoding. (TFS 7860)

Updates

- Resolved four issues with the PO Number field in purchase order and credit memo invoices. (TFS 7884)
  - If a user initially entered an invalid PO number, all subsequent searches with a valid PO number would not load data. Now, after the user enters a valid PO number, the eForm correctly loads values.
  - If the user replaced a valid PO number with an invalid number, the eForm incorrectly cleared portions of the invoice data. Now, the eForm persists all the values associated with the valid PO number or deletes all values associated with an invalid PO number.
  - The eForm no longer displays a confirmation message when the user enters a valid PO number after entering an invalid PO number.
  - The eForm no longer displays a confirmation message when the user changes the PO number on credit memo invoices.

Previous Patch (August 23, 2013)

This patch included the following versions:

- Perceptive AP Invoice eForm 11.0.0.160
- Perceptive Intelligent Capture Connector 11.0.0.160

AP Invoice eForm

Updates

- Resolved an issue with the Pay Immediately check box. Previously, if the AP_ReindexAndCPMapping.js or AP_Validate_Server.js scripts processed the eForm, the Pay Immediately value did not set the custom property correctly. (TFS 7873)
- Resolved an upgrade issue with the Lawson version of the AP Invoice eForm installer. Previously, if upgrading the eForm from a version prior to 10.5.x, an undefined variable in the AP_Export.xml file prevented the installer from completing. (TFS 7874)

Intelligent Capture Connector

Updates

- Updated the library files shared with AP Invoice eForm.

Intelligent Capture for Invoices

No updates.

Historical patches

Previous Patch (August 9, 2013)

This patch included the following versions:

- Perceptive AP Invoice eForm 11.0.0.153
- Perceptive Intelligent Capture Connector 11.0.0.153

AP Invoice eForm

Enhancements

- AP Invoice eForm is now available for SAP.
- With AP Invoice eForm for SAP, you can enable goods receipts. Goods receipts allow your users to track the inbound movement of items, such as inventory, without requiring payment or authorization information. Each goods receipt includes a document ID, year, and item.

For more information on goods receipts, refer to the “Configure goods receipts within the eForm for SAP” section of the *Perceptive AP Invoice eForm Supplemental Guide 11.0*.

- In SAP integrations, the Automatic Tax Calculation check box allows SAP to calculate an invoice tax amount rather than using the value provided in the eForm. When selected, SAP calculates the invoice tax separately using its own internal tables or external tax engine.

  For more information, refer to the “Enable the Automatic Tax Calculation check box” section of the *Perceptive AP Invoice eForm Supplemental Guide 11.0*.

Updates

- In AP_Validate_Server.xml, in the `<required_fields>` node, updated the `enable` attribute to ignore required field validation properly when the attribute is set to false. (TFS 7732)
- Resolved an issue that caused the validation error flagging, a red border, to appear incorrectly around the line-level amount and percent fields. Now, when a user types a value into one of the two fields, validation correctly removes the error flags. (TFS 7733)

Intelligent Capture Connector

Updates

- Updated the library files shared with AP Invoice eForm.

Intelligent Capture for Invoices

No updates.
